EXAMINER

KENDALL, CHUCK O

ART UNIT PAPER NUMBER

2192

DATE MAILED: 07/19/2006

Please find below and/or attached an Office communication concerning this application or proceeding.

Office Action Summary	Application No.	Applicant(s)	
	09/989,562	NIYOGI ET AL.	
	Examiner	Art Unit	
	Chuck O. Kendall	2192	

-- The MAILING DATE of this communication appears on the cover sheet with the correspondence address --

Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) OR THIRTY (30) DAYS, WHICHEVER IS LONGER, FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

Status

- 1) ☒ Responsive to communication(s) filed on 10 January 2006.
- 2a) ☐ This action is FINAL. 2b) ☒ This action is non-final.
- 3) ☐ Since this application is in condition for allowance except for formal matters, prosecution as to the merits is closed in accordance with the practice under *Ex parte Quayle*, 1935 C.D. 11, 453 O.G. 213.

Disposition of Claims

- 4) ☒ Claim(s) 1-21 and 26 - 29 is/are pending in the application.
- 4a) Of the above claim(s) 22 - 25 is/are withdrawn from consideration.
- 5) ☐ Claim(s) _____ is/are allowed.
- 6) ☒ Claim(s) 1-21 and 26 - 29 is/are rejected.
- 7) ☐ Claim(s) _____ is/are objected to.
- 8) ☐ Claim(s) _____ are subject to restriction and/or election requirement.

Application Papers

- 9) ☐ The specification is objected to by the Examiner.
- 10) ☒ The drawing(s) filed on 20 November 2001 is/are: a) ☒ accepted or b) ☐ objected to by the Examiner.
Applicant may not request that any objection to the drawing(s) be held in abeyance. See 37 CFR 1.85(a).
Replacement drawing sheet(s) including the correction is required if the drawing(s) is objected to. See 37 CFR 1.121(d).
- 11) ☐ The oath or declaration is objected to by the Examiner. Note the attached Office Action or form PTO-152.

Priority under 35 U.S.C. § 119

- 12) ☐ Acknowledgment is made of a claim for foreign priority under 35 U.S.C. § 119(a)-(d) or (f).
- a) ☐ All b) ☐ Some * c) ☐ None of:
1. ☐ Certified copies of the priority documents have been received.
 2. ☐ Certified copies of the priority documents have been received in Application No. _____.
 3. ☐ Copies of the certified copies of the priority documents have been received in this National Stage application from the International Bureau (PCT Rule 17.2(a)).

* See the attached detailed Office action for a list of the certified copies not received.

DETAILED ACTION

1. A request for continued examination under 37 CFR 1.114, including the fee set forth in 37 CFR 1.17(e), was filed in this application after final rejection. Since this application is eligible for continued examination under 37 CFR 1.114, and the fee set forth in 37 CFR 1.17(e) has been timely paid, the finality of the previous Office action has been withdrawn pursuant to 37 CFR 1.114. Applicant's submission filed on 01/10/06 has been entered.

2. Claims 1 – 21 and 26 - 29 are pending.

Claim Rejections - 35 USC § 102

3. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.

4. Claims 1 – 21 and 26 - 29 are rejected under 35 U.S.C. 102(e) as being unpatentable over Burd US 6,990,653 B1.

Regarding claim 1, Burd anticipates a computer-implemented method/computer readable medium (regarding medium see 22:44 – 50) for providing content to a target device, the method comprising:

identifying a device associated with the target device (3:15 – 18, see client side computer system);

compiling an application based on a page file including information describing the content to be returned to the target device, the information including statements of device class-specific user interface display properties for the content to be returned, the device class specific user interface display properties being based on the device class of the target device (3:18 – 28, see *data model* for “*device class specific user interface display properties*” also see dynamic web page and create a compiled class);

evaluating the device class-specific user interface display properties to override default user interface display properties (3:35 – 38, for determining whether a compiled class for the dynamic web page content file resides in memory) ; and rendering the content based on the device-class specific interface display properties of the content within the compiled application (3:37 – 42, see dynamically generate web page content and rendered).

Regarding claim 2, the computer-implemented method of claim 1, wherein the device class is included within an instruction to transmit the content to the target device (4:34 – 39, shows the compiled class with is instantiated to render the client display).

Regarding claim 3, the computer-implemented method of claim 2, wherein the instruction comprises a request generated by the target device (4:65 – 5:10, shows communicating requests between client 100 and server 116).

Regarding claim 4, the computer-implemented method of claim 3, wherein the request comprises an HTTP request for the page file (4:65 – 67).

Regarding claim 5, the computer-implemented method of claim 3, wherein the instruction further includes an identification of the page file (5:10 – 15, see URL and specifies static content file 122).

Regarding claim 6, the computer-implemented method of claim 1, wherein the information describing the content includes tags within the page file that identify at least one server object that is programmed to create the content (11:25 – 30, see HTML control tags).

Regarding claim 7, the computer-implemented method of claim 1, wherein the statements that provide the choices include a declarative statement identifying at least one choice for at least one property of a server object corresponding to the declarative statement (11: 30 – 35, see server side control object declarations).

Regarding claim 8, the computer-implemented method of claim 7, wherein the at least one choice applies if a pre-determined condition is satisfied (11:35 – 41, see declarative name/value attribute pairs and specify property arguments).

Regarding claim 9, the computer-implemented method of claim 1, wherein compiling the application further comprises generating code that describes a control hierarchy of server objects that are programmed to create the content (5:62 – 65, see generate server side control hierarchy).

Regarding claim 10, the computer-implemented method of claim 9, wherein evaluating the choices comprises instantiating the control hierarchy based on the generated code (5:30 – 34, see instantiate server side control objects).

Regarding claim 11, the computer-implemented method of claim 9, wherein a server object includes a user interface display property and the control hierarchy further includes at least one choice for that user interface display property, the choice including a filter against which the device class of the target device is evaluated to determine whether to apply that choice to the user interface display of the content (5:35 – 45, see one or more server side control objects map to one or more user interface elements, Examiner interprets the mapping to be able to determine where to apply the display content).

Regarding claim 12, the computer-implemented method of claim 1, wherein evaluating the choices includes comparing the device class of target device against a filter to determine whether to apply the existing value that choice to the user interface display property (18:43 – 62, shows analyzing for a specific type of information and gleaned the information from the data structure and 19:5 – 15, shows after determination and analysis rendering the information, *note: this is what is applied to the source file for the specific client device*).

Regarding claim 13, the computer medium version of claim 1, see rationale as previously discussed above.

Regarding claim 14, the computer medium version of claim 3, see rationale as previously discussed above.

Regarding claim 15, the computer medium version of claim 4, see rationale as previously discussed above.

Regarding claim 16, the computer medium version of claim 5, see rationale as previously discussed above.

Regarding claim 17, the computer readable medium of claim 13, wherein the page includes tags that identify at least one server that is programmed to create the

content, and at least one device condition and an associated value for a user interface display property of the at least one server object (11: 28 – 65, see custom server side control objects are specified using declarative tags, also see 11:35 – 40, for declarative name/value attribute on a tag element).

Regarding claim 18, the computer readable medium of claim 17, wherein the tags include a declarative statement identifying the choice for the property of the control (11: 28 – 65, see custom server side control objects are specified using declarative tags).

Regarding claim 19, the computer medium version of claim 8, see rationale as previously discussed above.

Regarding claim 20, the computer medium version of claim 9, see rationale as previously discussed above.

Regarding claim 21, the computer medium version of claim 11, see rationale as previously discussed above.

Regarding claim 26, the method of claim 1, wherein a first user interface display property of the content to be returned identifies a graphic element and wherein the choice for the first user choice of values corresponding to different graphics, each

graphic being suitable for display on a different, associated device class (4:45 – 50, see discloses web page content and in 1:35 – 40, Burd describes on the client computer system that the web page include visual images/graphics also see 3:20 – 25, for the specific device model which stores the dynamic web page).

Regarding claim 27, the method of claim 1, wherein a first user interface display property of the content to be returned identifies a font size and wherein the choice for the second user interface display property is a choice of values corresponding to different font sizes based on the device class, each value corresponding to a font size associated with a different device class (9:20 – 24, shows a code render block, which includes inline Code and Inline expressions such as font size which is also included in the dynamic content file for the data model).

Regarding claim 28, the method of claim 1, wherein a third user interface display property of the content to be returned identifies a user control element and wherein the choice for the third user display property is a choice of different user controls, each user control being suitable for display on a different, associated device class (5:33 – 36, see server side control objects map to one or more *user interface elements/user control element* which are to be used in the dynamic content).

Regarding claim 29, the method of claim 9, wherein each user interface display property corresponds to an input parameter for an associated server object in the

control hierarchy of server objects that create the content (11:36 – 42, shows In-line template parameters associated with the server side control object providing an appropriate “template” prefix child-element to the parent server control object).

Response to Arguments

5. Applicant's arguments with respect to claims 1 – 21 and 26 - 29 have been considered but are moot in view of the new ground(s) of rejection.

Conclusion

6. Any inquiry concerning this communication or earlier communications from the examiner should be directed to Chuck Kendall whose telephone number is 571-272-3698. The examiner can normally be reached on 10:00 am - 6:30pm.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Tuan Q. Dam can be reached on 571-272-3695. The fax phone number for the organization where this application or proceeding is assigned is 571-273-8300.

Art Unit: 2192

Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR. Status information for unpublished applications is available through Private PAIR only. For more information about the PAIR system, see <http://pair-direct.uspto.gov>. Should you have questions on access to the Private PAIR system, contact the Electronic Business Center (EBC) at 866-217-9197 (toll-free).
